

Hello! Welcome to the code interview.

We'd like you to spend the next 40 minutes working on extracting the fields from this following scan. Use Python and the OCR library of your choice. Write a command line application which takes a PDF file name as input, and prints a formatted representation of the PDF to the output.

We **are not** expecting you to finish within the 40 minute block, so please submit whatever code you have completed at the end of the session.

You can get started by extracting the text from this PDF 😊, but the real challenge is in the image below.

File Number	AB1234545
<b>STATUS</b>	Unspecified
<i>Address</i>	780 Applegate Ave. Freeport, NY 11520
Processed date	12/5/2023
<u>Notes</u>	
next action	take the fourth file to processing
